

Multi-Platform Video With OneTouch Desktop

Standardize your users experience with the full security and flexibility to join any video platform.

OneTouch Desktop

OneTouch Desktop is a Windows 10-based platform that allows users to quickly start an adhoc meeting or join a scheduled meeting on any platform on one interface. This allows users to focus on work and go to one app for all of their video meetings.

Calendar Integration

OneTouch Desktop fully integrates with both Office 365 and Google Calendar. The system can be set up as a User Account to show all of the upcoming meetings. All of the meetings booked show up in the main interface or can be set to Auto-Start.

Our simple interface allows users to connect to calls quickly and avoid the loss of time while starting up a meeting. Simply Click the Join Button or allow the system to launch calls automatically.

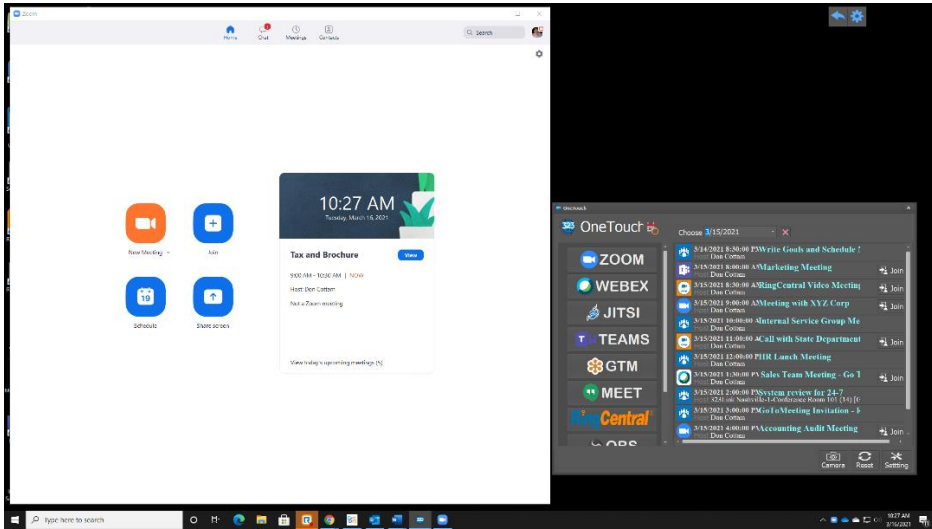

The main menu allows you to preview and control cameras, reset the apps, and get in to the full settings to customize the system interface and security level.

OneTouch Desktop is fully compatible with Zoom and runs much like a Zoom Room in full screen, dual displays automatically while using the regular Zoom Client. Zoom is also a great way to record sessions. All of the well known platforms are supported. With Auto-Start, your meetings will start automatically at the time of the call.

The Flexibility to Join Any Meeting

Microsoft Teams is fully supported by OneTouch Desktop but doesn't limit you to how you can connect to others. With OneTouch you can have a Teams meeting and then attend meetings on Webex, RingCentral, Zoom, GoToMeeting, and record via OBS. Stream to YouTube, Facebook, and other streaming services.

Make Collaboration Simple for Users

OneTouch Desktop has a full camera controller for most USB based cameras and allows you to preview cameras before you start your call. The systems Reset Button allows you to clear everything open on the system for a fresh start for the next meeting. With OneTouch Desktop users have a single place to find all of their video and collaboration apps and the schedule of meetings for the day. OneTouch Desktop gives users a similar interface to the OneTouch Room platform to have a single interface for everyone. The software provides users the exact tools they need for meetings on any platform without the need to find the meeting links or the application in windows. With Auto-Start, the call pops up when it is time to meet. Missed calls are a thing of the past.
